- Dhanush helps businesses evolve their overall strategy, roadmap and intermediate milestones in deploying IT Solutions.

Brand: Dhanush Infotech

HQ: Hyderabad, Telangana

Challenges

Huge on-field operations with over 2000 employees

All of these employees are using company provided android tablets

These tablets need to have certain apps

These apps have to be updated to ensure optimal performance of employees

Website: www.dhanushinfotech.com

Solution

mSuite's App Management helps push the required apps onto devices from the admin console.

It also enables pushing updates i.e. the latest version of all the necessary apps to ensure optimal employee performance.

Customer's Story

Over 2000 of our on-field employee force had been using android tablets for some of our government projects. These tablets need to have certain specific apps in order to ensure these projects can be applied successfully. The responsibility of ensuring these apps are installed on all the tablets comes onto the IT team. Additionally, the IT team needs to ensure that all these apps remain updated at all times for the employees to deliver optimal performance.

Considering these requirements and a lot of other features like anti-malware etc. we decided to start using **Seqrite mSuite**.

I would also like to add that IT software are often hard to apply but the Seqrite team has gone above and beyond, by even doing minor tweaks in their product, in order to ensure mSuite completely fits our needs. ”
