Seqrite Endpoint Security Cloud

Simple, comprehensive cloud based endpoint security for workstations, laptops and servers.

Seqrite Endpoint Security Cloud is a simple and comprehensive platform that lets you manage the security for multiple endpoints remotely from anywhere. Whether you’re on the move, at work or at home, Seqrite EPS Cloud ensures complete security with easy manageability. It offers a wide range of advanced features like Advanced Device Control, DLP, Web Filtering, Asset Management etc. to ensure complete security and enforce control.
Why Seqrite Endpoint Security Cloud?

1. Comprehensive Cloud based Endpoint Security and Control
   Seqrite Endpoint Security Cloud is a simple yet powerful platform which requires no hardware/software and can manage endpoint security directly from the cloud. It helps to enforce control over web access, data with a wide range of features such as Advanced Device Control, DLP, Asset Management, etc.

2. Multi-layered Protection
   Seqrite Endpoint Security is certified by various industry certifications and integrates innovative technologies like Advanced DNA Scan, Behaviour Detection, Anti Ransomware to protect your system from malware and advanced threats at different levels.

3. Less Technical Expertise to Manage Endpoint Security Solution
   It does not need a dedicated technical staff to manage the security solution. It is hosted on cloud and gets upgraded automatically requiring no resource involvement and technical expertise. It provides faster delivery of product upgrades which automatically gets rolled out to endpoints.

4. Centralized Management and Control
   User friendly interface for monitoring, configuring and managing systems in the network with detailed report and graphical dashboard.

Feature Description

## Core Protection

- **Antivirus**
  Offers malware protection that is certified by leading industry certifications.

- **Anti Ransomware**
  Protects from ransomware attacks and automatically takes backup of files.

## Network Protection

- **IDS/IPS**
  Detects malicious network activities to exploit application vulnerabilities and blocks intruder attempts.

- **Firewall**
  Monitors inbound and outbound network traffic based on rules.

## Web Protection

- **Browsing Protection**
  Blocks malicious sites.

- **Phishing Protection**
  Blocks phishing sites.

- **Web Filtering**
  Blocks sites as per its categories.

- **Scheduled Internet Access**
  Schedule time based internet access.

## Device Control and DLP

- **Advanced Device Control**
  Enforce policies regarding the use of storage devices, mobile and portable devices, wireless devices, network interfaces connected to endpoints.

- **Data Loss Prevention**
  Prevents data loss by monitoring confidential and user defined data shared through removable devices, network or various applications.
Feature Description

Application and Asset management

**Asset Management**
Gives total visibility of hardware and software running on endpoints, helps to track software/hardware changes on endpoints.

**Tune-up**
Clean junk files and delete invalid registry/disk entries to improve performance of endpoints.

Management and Control

**Cloud Based Administration**
Cloud based administration with graphical dashboard, group and policy management, email notification, easy deployment.

**Application Control**
Monitor compliance to enterprise security policies on each endpoint. Enforce control over the use of unauthorized applications within the network.
