

Seqrite Endpoint Security (EPS)

Simple and Comprehensive Endpoint Security for workstations, laptops and servers.

Seqrite endpoint security is a simple and comprehensive platform which integrates innovative technologies like Anti Ransomware, Advanced DNA Scan, and Behavioural Detection System to protect your network from today's advanced threats. It offers wide range of advanced features like Advanced Device Control, DLP, Vulnerability Scan, Patch Management, Web Filtering, Asset Management, etc. under a single platform to enable organizations to ensure complete security and enforce control.

Why Seqrite Endpoint Security?

1

Comprehensive Endpoint Security and Control

Seqrite Endpoint Security is a simple yet powerful platform to manage security and helps to enforce control over data, application, web access with a wide range of features such as Advanced Device Control, DLP, Asset Management, Application Control, etc.

2

Multilayered Protection

Seqrite Endpoint Security is certified by various industry certifications and integrates innovative technologies like Advanced DNA Scan, Behaviour Detection, Anti Ransomware to protect your systems from malware and advanced threats at different levels.

3

Scan and patch application vulnerabilities

Seqrite Endpoint Security detects application and operating system vulnerabilities and also helps to fix those by installing missing patches. Regular updating of applications makes network less vulnerable to malware attacks.

4

Centralized Management and Control

User friendly interface for monitoring, configuring and managing systems in the network with detailed report and graphical dashboard. Primary and Secondary Server architecture to manage distributed network effectively.

Feature Description

Core Protection

Antivirus

Offers malware protection that is certified by leading industry certifications

Anti Ransomware

Protection from ransomware attacks and automatically takes back-up of selected files types.

Application and Asset Management

Application Control

Enforce control over the use of unauthorized applications within the network.

Asset Management

Gives total visibility of hardware and software running on endpoints and also helps to track software / hardware changes happening on endpoints.

Device Control and DLP

Advanced Device Control

Enforce policies regarding the use of storage devices, mobile and portable devices, wireless devices, network interfaces connected to endpoints.

Data Loss Prevention

Prevents data loss by monitoring confidential and user defined data shared through removable drives, network or various applications.

Management and Control

Centralized Administration

Web-based console with graphical dashboard, group and policy management, email and sms notification, easy deployment.

Roaming Platform

Manage clients even if they move out of the corporate network.

SIEM Integration

Forwards security events from EPS to your SIEM systems to aid in correlation, analysis, and revealing patterns of activity that may indicate an attempt of intrusion.

Vulnerability Scan and Patch Management

Vulnerability Scan

Provides summarized view of vulnerabilities as per severity

Patch Management

Centralized patch management solution to patch vulnerabilities of Microsoft and Non-Microsoft application.

Feature Description

Network Protection

- 
IDS/IPS
 Detects malicious network activities which exploit application vulnerabilities and blocks intruder attempts.
- 
Firewall
 Monitors inbound and outbound network traffic based on rules.
- 
Port Scan Attack Prevention
 Alerts about port scanning attack.
- 
DDOS Attack Prevention
 Alerts about DDOS attacks.

Web Protection

- 
Browsing Protection
 Blocks malicious sites.
- 
Phishing Protection
 Blocks phishing sites.
- 
Web Filtering
 Blocks sites as per its categories.
- 
Scheduled Internet Access
 Schedule time based internet access.
