

Quick Heal

Quick Heal **AntiVirus Pro Advanced**

Smart | Secure | Sustainable

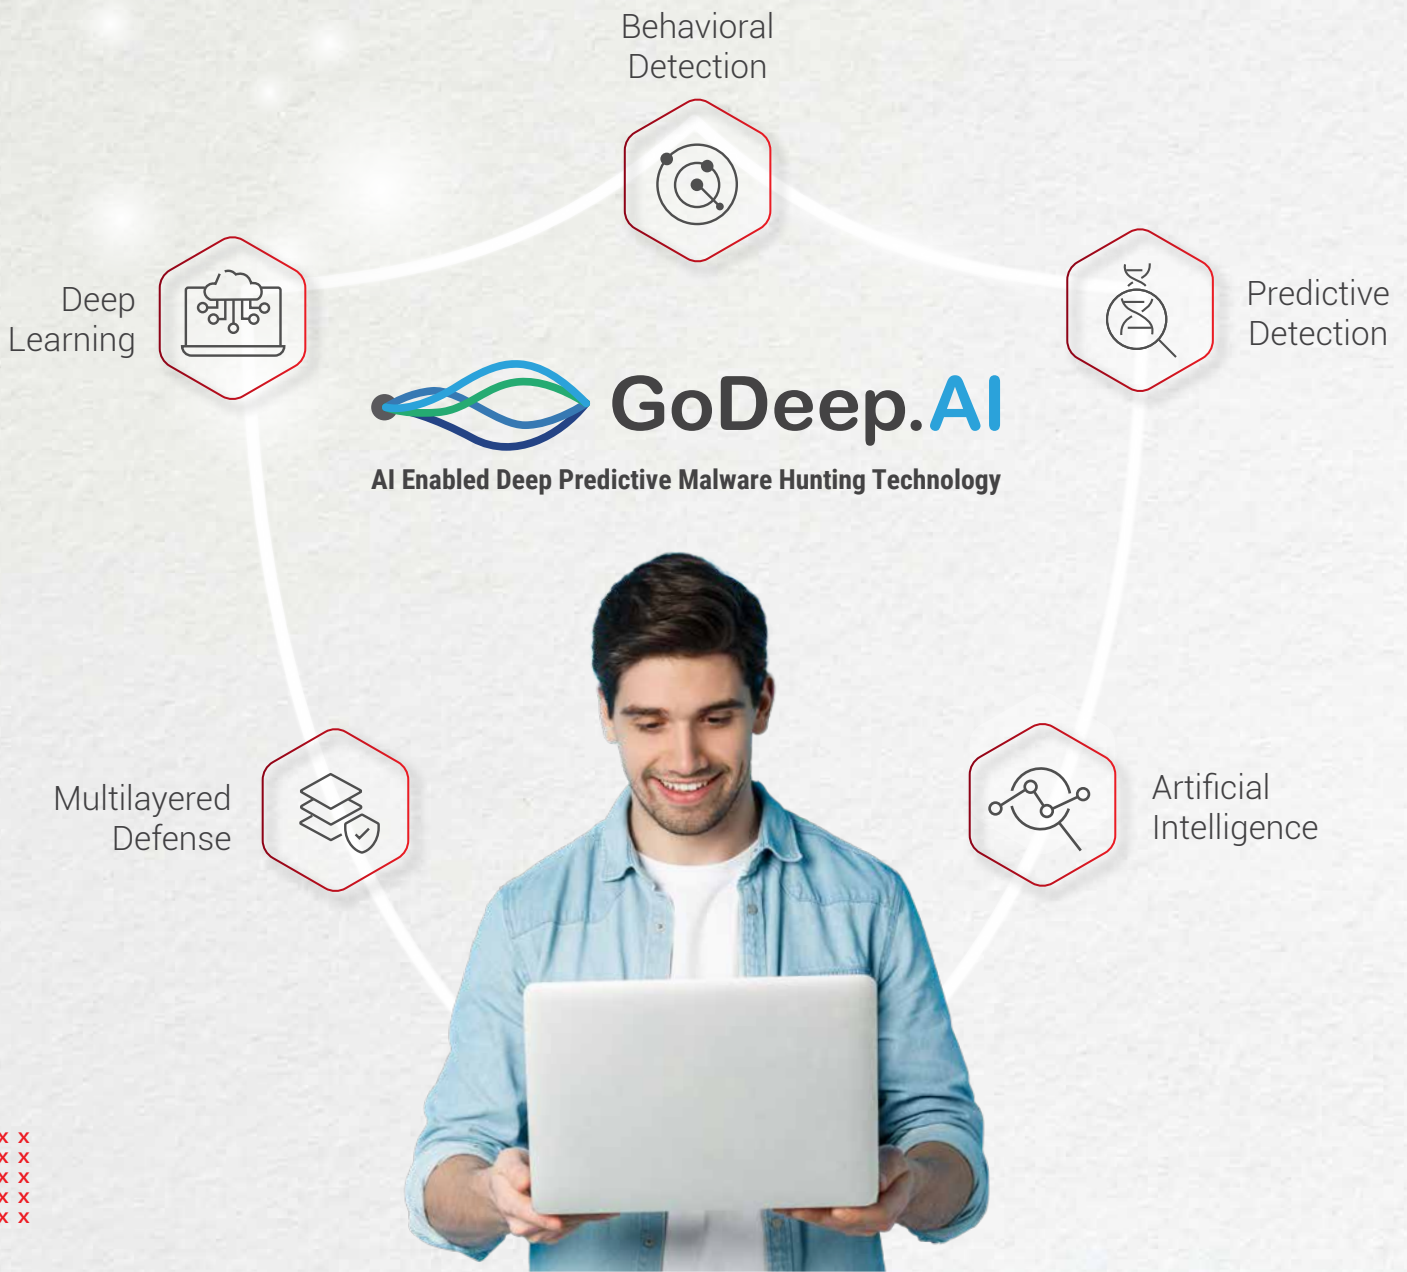

Quick Heal's Next-Generation Cyber Security Solutions are powered by GoDeep.AI

GoDeep.AI is a cutting-edge malware-hunting technology powered by Artificial Intelligence.

Our **Deep Learning Module** learns and remembers every historical malware threat and stores the learnings in a centralized cloud. It feeds the **Artificial Intelligence algorithm** to learn and evolve in real-time, providing the engine with the capabilities of **Predictive Detection**.

This algorithm works conjointly with **Behavioral Detection technology** that monitors and tracks the activities of each program. This technology further blocks the program immediately if its behavior is found suspicious. GoDeep.AI, with its advanced technology, protects users from threats that have never occurred before **Zero Day attacks**.

Product Highlights

Stay protected with robust scan engine

Virus Protection

- Blocks virus infections that try to infect computer programs to gain admin control and steal your data.

Malware Protection

- Detects all kinds of malware, viruses, worms, Trojans, and spyware that try to infect your PC from various sources and removes them instantly.

Advance DNAScan

- Keeps an eye on all the running programs on your PC to trace any suspicious behavior. DNAScan, our indigenous and proven detection mechanism, detects new and unknown malicious threats based on behavioral classification of the documents and files.

Secure email communications

Email Protection

- Prevents malwares coming through emails.

Surf the Internet safely

Browsing Protection

- Blocks suspicious and harmful websites that can download malwares and worms to your PC or steal your data.

Curb the possibility of virus spread

USB Drive Protection

- Stops autorun malwares of the USB drive to curb spread of malware to your system.

Prevent ransomware attempts

Ransomware Protection

- Takes a backup of your data on regular basis, so if there is any ransomware attack, you can remove ransomware and restore your data without getting affected.

Browse in a safe world

Browser Sandbox

- Ensures that malwares embedded in browsers do not access folders on your computer.

Prevention is better than cure

Scan External Devices

- As soon as you connect any external devices to your computer, they must be scanned to ensure if they are safe and there is no risk of malware spread to your computer.

System Requirements

Operating System Microsoft Windows XP (SP2) and higher	RAM 2 GB or more
CPU Intel Pentium 4 or higher	Disk Space 1.7 GB or more
Browser Internet Explorer 6 or higher	Additional requirements <ul style="list-style-type: none"> Internet connection to receive updates and for activation. Minimum screen resolution 1024 X 768.
