

Protect corporate data on employee-owned devices without compromising their data privacy with Seqrite Workspace

android enterprise
service provider

THE CHALLENGE

Bring-Your-Own-Device (BYOD) has already been adopted by the majority of businesses along with other mobile device strategies as a part of enterprise mobility initiatives. However, organizations are struggling to establish a stable framework to secure business-critical data inside employee-owned devices.

Some of the most common challenges enterprises face with employees working on their own mobile devices are:

- Securing business data on such devices
- Complying with corporate policies
- Balancing workforce-business expectations.
- Ensuring employee productivity
- Declining employee engagement levels

THE SOLUTION

Seqrite Workspace is an intelligent application, designed and developed keeping these organizational challenges in mind. It resolves the impasse by creating a virtual partition in a personal device wherein business and personal data reside as mutually exclusive entities. It further ensures that a bi-directional exchange of personal and business information is rendered impossible.

Seqrite Workspace accelerates enterprise BYOD initiatives by providing complete control of your data on an employees' personal device. While a business data breach causes significant reputational and monetary losses, our solution ensures the complete security of enterprise data.

Workspace resolves enterprise BYOD challenges by offering solutions such as:

- Corporate Data Management & Security
- Compliance Adherence
- Round-The-Clock Availability of employees
- Remote Data Wipe

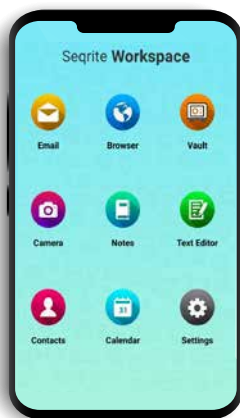

Seqrite Workspace Offers These Powerful Capabilities:

Email, Calendar & Contacts

Employees can access their official emails synchronized with the well-integrated calendar and contacts, enabling users to receive desktop-like experience on the go.

Secure Browser

IT admins can configure and apply an array of cross-organizational browsing policies, including Blacklisting and Whitelisting of websites & keywords.

Vault

A central repository holding complete enterprise content received in the Workspace application through emails and broadcasts. The vault has in-built military-grade security aspects to thoroughly shield it from data thefts.

Easy Text

With two dedicated modules only for jotting text, Workspace ensures that no information is ever lost.

Single Sign-On (SSO)

Enable ease-of-access with single sign-on through which employees do not need to set separate passwords for individual capabilities inside Workspace.

Third-party app support

Add key business third-party/custom apps in the work profile to ensure employee collaboration and seamless business operations.

Data Loss Prevention (DLP)

This feature restricts users from capturing screenshots, copying/pasting content, and extracting data from the Application.

Intelligent Camera

Workspace's camera ensures that media generated from it remains secure and cannot be extracted out of the App.

Workspace Remote - Wipe

In the unforeseen event of employee(s) going untraceable, Workspace's remote-wipe feature erases all official data from the employee's device.

Seqrite Workspace supports Office 365 and G Suite.

Benefits

- Secure enterprise data residing on employees' personal devices.
- Increase employee availability with flexible access to enterprise data, anytime & from anywhere.
- Boost business productivity owing to improved employee access.
- Enhance workforce experience by enabling the availability of secured business data through a single application.
- Immersive and engaging interface for employees and stakeholders.
